G403 Firmware Release Notes

Firmware: v1.02
Hardware: A1
Date: September 7th, 2022

Problems Resolved:
- GUI crash after input the special characters (~!@#$%^&*()_-+\ /[]{}:';=?<>,.'.); Cannot connect network after config PPPoE password with those special characters.
- USSD cannot support multiple layer menu.
- When running Cellular wizard of App, once in a while it shows 'No Internet' after unlock SIM card PIN code.

Enhancements:
- Change default WAN type from Ether WAN to Cellular WAN

Known issues:
- The test result for download/upload speed is different with speedtest.
